

AT LAST!

a stock control & pricing system for AUSTRALIAN small businesses you really can afford:

One of the really important ways in which a computer can be used to help run a small business efficiently and profitably is by using it to streamline your Stock Control and Pricing system. But until now, if you wanted to do this, you have had only two real choices -- neither of them very attractive.

You could buy or lease a mini or small mainframe computer, and have a custom program written to do just what you wanted -- presuming you had \$30,000 or more to spare, that is! Needless to say, few small businesses could afford this approach even though it can provide a really powerful system.

The alternative was to buy one of the new low cost microcomputers, together with an off-the-shelf "inventory" program. This involved a far lower outlay, but the resulting system left a lot to be desired. This was partly because the computers were limited in terms of performance

and reliability, but mainly because the available inventory programs had all been written overseas, and were not really suitable for Australian conditions.

But now, thanks to Dick Smith, you have a third choice: a low cost computer, the System-80, whose performance and reliability are equal to the job, together with a powerful Stock Control and Pricing system program ("SCAP") that has been written in Australia especially for Australian small businesses.

So now any Australian business with 1200 stock lines or less can have all of the benefits of a computerised Stock Control and Pricing system for a TOTAL COST of less than \$4000. Yes, that includes BOTH hardware and software -- everything!

Sound interesting? Turn overleaf for more details. . .

DICK SMITH'S 'SCAP'

(stock control
& pricing) system.

SCAP is a powerful computer program designed to run on the very popular System-80 computer. It has been written in Australia, specifically to meet the needs of small to medium Australian business firms. Here are some of the many outstanding features which it can offer YOU, to help you run your business more efficiently, more confidently and more profitably:

- Control and management of up to 1200 stock lines.
- Simple "menu-driven" operation, whereby the program itself asks you what you want to do, then guides you by telling you how to do it.
- The ability to get up-to-date information for any stock item in seconds, on the video screen.
- The use of an exclusive machine-language sorting routine, which allows SCAP to add new items to your system in the correct order **three times faster** than with similar existing systems. Maximum sorting time is around 7 minutes, instead of 20 minutes.
- The ability to get an up-to-date summary of your overall stock position at any time, again in seconds. Concise information on the number of lines out of stock, below minimum stock level, on order, etc., month-to-date and year-to-date sales figures, plus the amounts of money you have tied up in stock-on-hand and committed to stock on order.

- The ability to produce up-to-date (and **dated**) printed **price lists** and **stock status listings** whenever you need them. All of these printed listings may be of either all items in the system, or for selected sub-groups: item categories selected by number prefix, by supplier, or by status (out of stock, below minimum stock level, on order etc.). Stock status reports can be arranged to show month-to date and year-to-date sales figures for both individual items and totals for all selected items.
- A simple "ADN" code which lets you conveniently "flag" new, adjusted and discontinued items on your printed price lists and stock status reports. Also **automatic** "NMO" flagging of Not-In-Stock, Below Minimum stock level and ON-Order items.
- The ability to take **Australian Sales Tax** into account, if required, in calculating realistic gross profit margins for each and every stock item. This is also an exclusive Dick Smith SCAP feature!
- Optional automatic adjustment of stock levels and status by keying in sales dockets, orders placed and stock received information. Up to 1200 sales dockets may be entered before SCAP has to "post" them and when it does so it will print out a **fully itemised sales docket posting report**, for later auditing.
- The ability to print out **stock item count sheets**, to make stocktaking easier. Then you can key in your physical stock count figures, and have the system produce a **printed stocktake analysis** showing all discrepancies. These are again exclusive Dick Smith SCAP features!

One of SCAP's big features is the use of "Menu" screens to guide you in its operation. At right is its Main System Menu, which as you can see gives you the option of choosing one of its main tasks. When you select the option you want, SCAP continues to guide you with further "menus", showing you the options available at each stage (even how to end up the program itself).

END OF LISTING

minimum hardware configuration

In order to run SCAP on your System-80 computer and get the full benefit of its features, you will need at least the following hardware items:

1 x System-80 computer, video monitor and expansion unit, with total of 32K of RAM memory.

2 x 40-track floppy disk drives with daisy-chain cable and power supply.

1 x 132-column printer with cable.

Easy Expansion

SCAP has been designed specifically to make it easy for either you, or the software programmer of your choice to extend its capabilities, if you wish, as your business grows.

The SCAP program is written in easily-understood BASIC language, and a full listing is supplied to you when you buy it. This makes modification and expansion quite straightforward.

And the biggest feature of all is that you get all of these powerful features for a tiny fraction of the price you'd have to pay for such a system before SCAP came along!

How SCAP compares with the Tandy system

Feature or performance parameter	SCAP	Tandy
Maximum number of stock items	1200	1000
Customise with your own company name?	YES	NO
Maximum sorting time (approximately)	7min	20min
Does it provide a Sales Tax option?	YES	NO
No. of Sales Dockets before posting	1200	1000
Fully itemised S. Docket posting report?	YES	NO
Does it provide for ADN status codes?	YES	NO
Provide automatic NMO status flags?	YES	NO
Maximum Quantity On Hand figure	999,999	32,767
Security Password	Optional	Mandatory
Secret "key" to inspect/change password?	YES	NO
Does it automatically enter zero cents in price?	YES	NO
Length of Item description field (chars)	25	19
Supplier or Vendor field length(chars)	4	6
Item Location field length(chars)	2	10
Number of price fields available	3	2
MTD/YTD Sales figures in screen summary?	YES	NO
All main reports selectable by prefix?	YES	NO
Does it print separate Price Lists?	YES	NO
Does it print stock counting sheets?	YES	NO
Will it perform stocktake analysis?	YES	NO
Ability to make backup disks	Inbuilt	(Via Dos)

And finally, the big question: what do you pay for all this?

Dick Smith's Stock Control and Pricing system (SCAP) comes to you on two 5-1/4in floppy disks (Program disk and Sample Data disk), together with a very comprehensive and highly readable User Manual.

NOTE: The computer hardware required in order to run SCAP, as listed overleaf, consists of an expanded System-80 computer with twin floppy disks and printer. At current prices this hardware will cost you \$3362.00, including tax but not including expendables like paper, blank floppy disks for making safety or "backup" copies, etc.
